

HUMAN RESSOURCES DIRECTION

TEACHING AND RESEARCH POSITION IN ORGANIZATION AND MANAGEMENT SCIENCES (CNU 06)

Candidature and letter of motivation to be sent by mail to:

Dominique Sciamma dominique.sciamma@cyu.fr

Copy Annie Gentes annie.gentes@cyu.fr, Laurence Rochut laurence.rochut@cyu.fr and Christiane Azzopardi christiane.azzopardi@cyu.fr

Before January, 17, 2022, 12am. Candidates Auditions at the end of January.

TEACHING AND RESEARCH POSITION

Teaching Profile

Detailed Teaching Profile	
The person recruited will integrate the new school "CY School of Design" within CY Tech engineering school and will teach there. He/she will mainly be involved in the Global Designer program (5 years), the double degree Digital Engineer-Designer program (6 years), the International Bachelor's degree "Datascience by Design" (4 years), and the professional and continuing education programs around the design and innovation approach that is developed and/or proposed by CY school of design and its partners. The candidate will be responsible for teaching the strategic, managerial and organizational dimensions of design practices. Teaching will also include an introduction to design research and interdisciplinary work and collaboration between designers and engineers. The lecturer is expected to participate in the development of new pedagogical methods or modalities through design within the Graduate School CY Tech and more generally for the benefit of the components of the University and schools of CY Alliance.	
Teaching language will be mostly French and English.	
Keywords:	Management, Organizational Sciences, Design, Innovation, Co-creation, Interdisciplinarity
Department/Site :	CY school of design
Working Address:	Saint-Germain en Laye, Campus Ixblue- 34 rue de la croix de fer 78100 Saint-Germain-en-Laye
School Director	dominique.sciamma@cyu.fr
internet	https://www.cy-ecolededesign.fr/

Research Profile

Detailed Research Profile	
<p>CY School of Design, a school of CY Tech, aims not only to train global designers for all transitions, from matter to decision, capable of grasping the challenges of the 21st century and occupying positions of responsibility in human organizations, but also to contribute to design research at a very high level, in order to advance the discipline. As design practice is based on an interdisciplinary culture of the project, the research activity will take advantage of the integration of the design school within the Engineering School to better understand interdisciplinarity in practice as well as the systemic (and therefore common and transversal) thinking that it relies on.</p> <p>Research in management sciences and design is thus fundamental to identify the issues and dynamics of deploying design methods in organizations and ecosystems as well as in emerging ecosystems. This new scale of design requires a detailed understanding of intra- and inter-organizational strategies as well as a novel observation methodology to involve heterogeneous stakeholders but also to include many “unknowns”, as emerging systems are not fully defined. The candidate is expected to have knowledge of these issues as well as experience in action research that allows him/her to set up experiments with stakeholders.</p> <p>The main objective of the position within CY School of Design is to contribute to the development of design research at the international level. The candidate will be attached to the Graduate School CY Tech. His/her work, skills and previous experience should enable him/her to propose, develop, and finance research projects at the interface between management sciences and design, to participate in a team of teacher-researchers, but also to develop and coordinate relationships with different partners within or outside CY Cergy Paris University: other universities, public and/or private laboratories, companies, on a national and international level.</p> <p>The teacher/researcher will participate in the development of disciplinary and transversal doctoral training in design within the doctoral and post-doctoral college of CY Cergy Paris University.</p> <p>The candidate is expected to have nationally and internationally recognized expertise in the research field of management sciences and design. He/she is expected to enjoy teamwork and to be able to lead collaborative research projects.</p>
